

.....  
NATAN™  
AMERICAN & FRENCH  
OAK FINISHING TANNINS  
.....

**Natural Aqueous Oak Tannin (NATAN™) CT is a 100% natural liquid oak product that is a source of hydrolysable ellagic finishing tannins formulated to be added in the final stages of maturation. In most circumstances, NATAN™ adds specific nuances and character to enhance spirits before bottling.**

## **What are the Benefits?**

- Provide oak aromatics that enhance the flavor
- Work in harmony to provide the structure, mouthfeel, and dimension
- Offer flexibility in timing of addition

*\*All of our NATAN™ aqueous tannins are affirmed as generally recognized as safe (GRAS) if it does not exceed 0.15 g/L. Please refer to Code of Federal Regulations, Title 21 - Sec. 184.1097.*

Results from ETS Oak Aroma Analysis. Results in ppb.  
\*Estimated result outside of calibration range.

**Red Blend:** volume, toast, and spice aromatic notes and complexity enriching the palate. Red Blend was created to combine the toasted oak characteristics from French oak and the rich lactones derived from American oak.

**French Complex:** rich roasted nuts, baked bread, graham crackers with intense mid-palate fill and fruit lift.

**French Mocha:** notes of clove, caramel, chocolate, and sweet coffee.

**French HiVan:** characters of vanilla, toasted oak, and confectionary sugar and will support the flavors in your beverage.

**American HiVan:** brings coconut, vanilla, and whiskey lactone. Reminiscent of Bourbon characteristics.

## NATURAL AQUEOUS OAK TANNIN FINISHING SAMPLE KIT

We supply finishing tannin kits to producers who want to enhance a spirit before bottling. Benchtop trials are essential in order to determine the appropriate product and dose rate. The addition rate required to achieve effective results is between 0.05 mL to 0.15 mL per liter.

Follow the recommended rate and dose your sample in a 100 mL bottle.

For best results review the trial after 48 hours.
