## NATURAL AQUEOUS OAK TANNINS PREMIERE CT

Oak Wise Natural Aqueous Oak Tannin (NATAN™) is a 100% natural liquid oak product that is a source of hydrolyzable ellagic tannins designed to enhance color, flavor, mouthfeel, and structure in wine, cider, spirits, and beer. The tannins are extracted from toasted 3-year air seasoned oak using only purified, filtered water and contain no preservatives.

Premiere CT are concentrated finishing tannins designed to enhance the final oak characteristics prior to bottling. There are five products in the Premiere CT range and all are derived from 100% American or French oak.

### What are the Benefits?

Premiere CT provides oak aromatics that enhance the beverage flavor and color

Finishing tannins work in harmony to provide the structure, mouthfeel and dimension

The tannins provide flexibility to add at aging or to finish the beverage

Formulated  
to Enhance  
Your  
Maturation  
Process

Results from ETS Oak Aroma Analysis. Results in ppb.  
\*Estimated result outside of calibration range.

**Red Blend:** volume, toast, and spice aromatic notes and complexity enriching the palate. Red Blend was created to combine the toasted oak characteristics from French oak and the rich lactones derived from American oak.

**French Complex:** rich roasted nuts, baked bread, graham crackers with intense mid-palate fill and fruit lift.

**French Mocha:** notes of clove, caramel, chocolate, and sweet coffee.

**French HiVan:** characters of vanilla, toasted oak, and confectionary sugar and will support the flavors in your beverage.

**American HiVan:** brings coconut, vanilla, and whiskey lactone. Reminiscent of Bourbon characteristics.

## NATURAL AQUEOUS OAK TANNIN FINISHING SAMPLE KIT

We supply finishing tannin kits to producers who are interested in modifying their beverage before bottling. Benchtop trials are essential in order to determine the appropriate product and dose rate before you make a purchasing decision. The addition rate required to achieve effective results is between 0.2 ml/L – 2.0 ml/L. Follow the recommended rate and dose wine in a sample bottle. For best results review the trial after 48 hours.
